*$F(e_i; e_i) = ((2 + \cos') \cos ; (2 + \cos') \sin ; \sin')$  is a smooth embedding of  $T^2$  into  $R^3$  whose image is the doughnut-shaped surface obtained by revolving the circle  $(y-2)^2 + z^2 + 1$  about the  $z$ -axis. Exercise 5.1. Verify the claims in the preceding example.*

*back cover: This book is an introductory graduate-level textbook on the theory of smooth manifolds. Its goal is to familiarize students with the tools they will need in order to use manifolds in mathematical or scientific research--- smooth structures, tangent vectors and covectors, vector bundles, immersed and embedded submanifolds, tensors, differential forms, de Rham cohomology, vector fields,*

*Problem 2-4 on page 58. In fact a map  $F : \mathbb{R}P^n \rightarrow M$  to a smooth manifold is smooth if and only if the composed map  $F \circ q : \mathbb{R}^{n+1} \rightarrow \mathbb{R}P^n \rightarrow M$  is smooth, as one sees by examining charts. In the case at hand the composed map  $P \circ q$  is smooth because it is equal to the composition of smooth maps  $q \circ P : \mathbb{R}^{n+1} \rightarrow \mathbb{R}^{k+1} \rightarrow \mathbb{R}P^k$ . 7.*
